

Catelas Early Case Intelligence

CATELAS EARLY CASE INTELLIGENCE

Catelas® is the first pure-play **Early Case Intelligence** solution based on a law enforcement approach, called **Relationship Forensics**. Because our approach is different, results are delivered faster and with greater precision.

Surprises cost money and the traditional approach of cull, search and review is iterative and wholly dependent on keywords selected before a matter is understood. Catelas informs you of what you did not know on day 1, even before the review begins. It is comprehensive, precise & fast and does not rely on keyword guessing.

CURRENT eDISCOVERY CHALLENGES

Over-collection

the scope of discovery is too broad because counsel cannot be sure who to exclude

Key-word culling

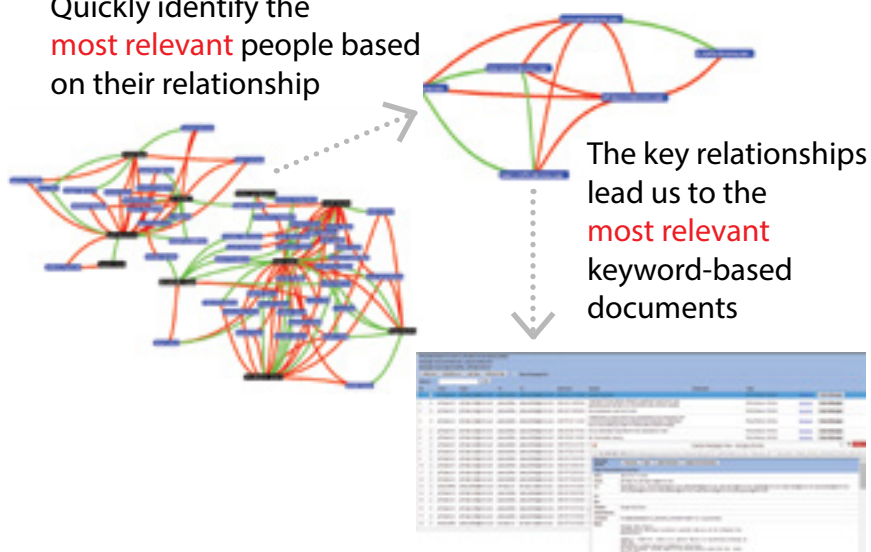

in order to narrow the scope to reasonable proportions, counsel uses 'best-guess' keywords

The current process is linear & iterative

preventing it from delivering early intelligence fast

FOLLOW THE RELATIONSHIPS TO THE EVIDENCE

Quickly identify the **most relevant** people based on their relationship

Early Case Assessment is all about identifying the right people up front and quickly reviewing the relevant communications. Catelas is unique in that it provides laser focus on the right people and content – much faster and ensures you have uncovered all pertinent relationships and data for a case. Getting it right early is the only way to keep costs down.

Scott Emery, former Director of Global Investigations, State Street Bank

WHAT IS RELATIONSHIP FORENSICS?

Catelas leverages social network analysis and behavioral science algorithms to analyze communications data, like email, IM, telephony and email server log files.

By automatically uncovering who is talking to whom, what they said and how well they know each other, Catelas quickly uncovers the 'hot people' in any corpus and follows their relationships to the 'hot documents'. An Early Case Report details the people and content that supports early decision making, allowing counsel to stay one step ahead.

WHAT MAKES CATELAS SO UNIQUE?

Identification

“no surprises”

Determine who to collect before you collect

Understand who is important, both internally and externally

Drive effective interviews & depositions fast

Focus the collection & defensibly reduce scope

Early Case Intelligence

“tell me what I don't know already”

Uncover the ‘hot documents’ in hours

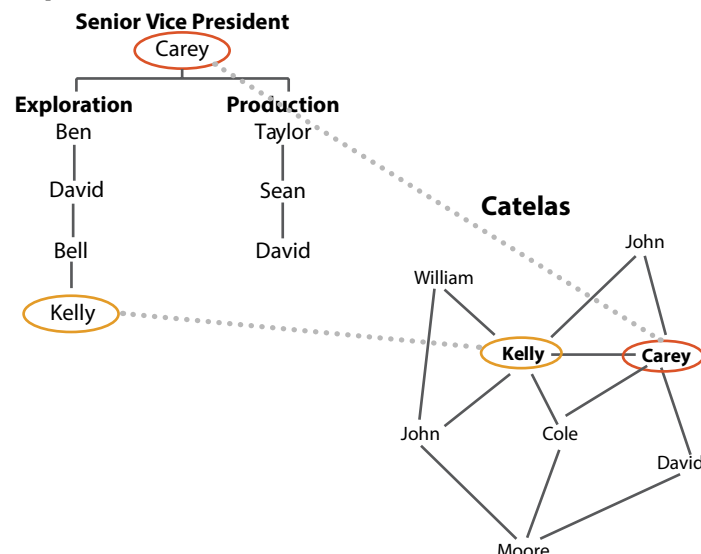

Discover Keyword Search terms automatically

Understand who matters & how they connect

Isolate key conversations

Prioritize the review in Relativity

Exploration & Production

Catelas' patented algorithms automatically uncover & grade the relationships that reflect 'how business gets done'.

Visualizing & searching such networks quickly identifies the key conversations and 'hot documents'. Catelas puts counsel ahead of the issues and ensures surprises are avoided.
